# SEWAGE DISPOSAL A PROBLEM ON FARM

Sanitation in Country Homes Needs Attention, Says Engineering Bulletin.

#### WELLS ARE CONTAMINATED

Plans and Specifications for an Improved Water System Are Given Free.

Few factors are so closely related to public health as that of sewage disposal. In this matter, at least, the city dweller still has the better of his country cousin.

In bulletin number 3 of the Engineering Experiment Station of the University of Missouri, entitled "Sanitaion and Sewage Disposal for Country Homes," the author, W. C. Davidson, points out the dangers of poor sewage disposal.

"Two of the common causes," he says, "of the spread of typhoid fever are the contamination of the water supply and the transmission of the disease by the ordinary house fly. That flies do transmit disease, notably typhoid fever, there is no longer any doubt."

A cistern or well may become contaminated by the seepage of sewage several hundred feet distant. That the water is clear, sparkling and odorfree from disease germs. In fact, well water contaminated often is likely to appear pure.

He discusses water earriage systems of sewage disposal, showing plans and specifications of various systems suit-The gospel of "back to the farm" is able to farm conditions, together with being preached to factory and other the itemized cost of each. Sewage workers in various cities by mission. Systems cost from \$6 to \$43, accordaries who travel from place to place ing to the style. This is exclusive in special cars.
